

Automata and Formal Languages (9)

Email: christian.urban at kcl.ac.uk

Office: SI.27 (1st floor Strand Building)

Slides: KEATS (also home work is there)

Functional Programming

```
def fib(n) = if n == 0 then 0
             else if n == 1 then 1
             else fib(n - 1) + fib(n - 2);

def fact(n) = if n == 0 then 1 else n * fact(n - 1);

def ack(m, n) = if m == 0 then n + 1
                 else if n == 0 then ack(m - 1, 1)
                 else ack(m - 1, ack(m, n - 1));

def gcd(a, b) = if b == 0 then a else gcd(b, a % b);
```

$Exp \rightarrow Var \mid Num$

|

$Exp + Exp \mid \dots \mid (Exp)$

|

$if\ BExp\ then\ Exp\ else\ Exp$

|

$write\ Exp$

|

$Exp ; Exp$

|

$FunName\ (Exp, \dots, Exp)$

$BExp \rightarrow \dots$

$Decl \rightarrow Def \ ; \ Decl$

|

Exp

$Def \rightarrow def\ FunName(x_1, \dots, x_n) = Exp$

Abstract Syntax Tree

```
abstract class Exp
abstract class BExp
abstract class Decl

case class
  Def(name: String, args: List[String], body: Exp)
    extends Decl
  case class Main(e: Exp) extends Decl

case class Call(name: String, args: List[Exp]) extends Exp
case class If(a: BExp, e1: Exp, e2: Exp) extends Exp
case class Write(e: Exp) extends Exp
case class Var(s: String) extends Exp
case class Num(i: Int) extends Exp
case class Aop(o: String, a1: Exp, a2: Exp) extends Exp
case class Sequ(e1: Exp, e2: Exp) extends Exp
case class Bop(o: String, a1: Exp, a2: Exp) extends BExp
```

Mathematical Functions

Compilation of some mathematical functions:

`Aop(" + ", a1, a2) ⇒ ...iadd`

`Aop(" - ", a1, a2) ⇒ ...isub`

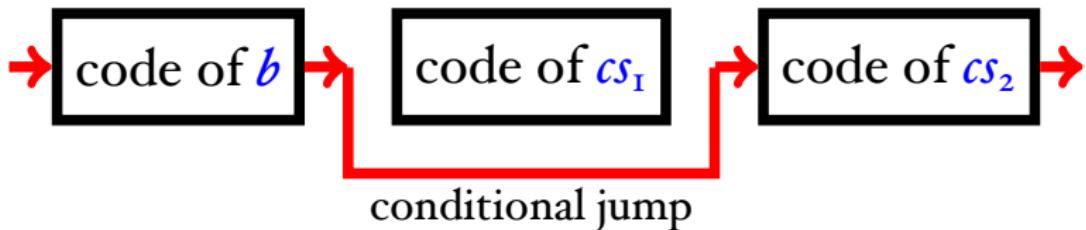

`Aop(" * ", a1, a2) ⇒ ...imul`

`Aop(" / ", a1, a2) ⇒ ...idiv`

`Aop(" % ", a1, a2) ⇒ ...irem`

Boolean Expressions

Compilation of boolean expressions:

`Bop(“==”, a1, a2) ⇒ ...if_icmpne...`

`Bop(“!=”, a1, a2) ⇒ ...if_icmpeq...`

`Bop(“<”, a1, a2) ⇒ ...if_icmpge...`

`Bop(“<=”, a1, a2) ⇒ ...if_icmpgt...`

Sequences

Compiling arg1 ; arg2:

...arg1...

pop

...arg1...

Write

Compiling `write(arg)`:

```
...arg...
dup
invokestatic XXX/XXX/write(I)V

case Write(a1) => {
    compile_exp(a1, env) ++
    List("dup\n",
         "invokestatic XXX/XXX/write(I)V\n")
}
```

Functions

```
.method public static write(I)V
    .limit locals 5
    .limit stack 5
    iload 0
    getstatic java/lang/System/out Ljava/io/PrintStream;
    swap
    invokevirtual java/io/PrintStream/println(I)V
    return
.end method
```

We will need for definitions

```
.method public static f (I...I)I
    .limit locals ??
    .limit stack ??
    ??
.end method
```

Stack Estimation

```
def max_stack_exp(e: Exp): Int = e match {
  case Call(_, args) => args.map(max_stack_exp).sum
  case If(a, e1, e2) => max_stack_bexp(a) +
    ^^I(List(max_stack_exp(e1), max_stack_exp(e2)).max)
  case Write(e) => max_stack_exp(e) + 1
  case Var(_) => 1
  case Num(_) => 1
  case Aop(_, a1, a2) =>
    ^^I max_stack_exp(a1) + max_stack_exp(a2)
  case Sequ(e1, e2) =>
    ^^I List(max_stack_exp(e1), max_stack_exp(e2)).max
}

def max_stack_bexp(e: BExp): Int = e match {
  case Bop(_, a1, a2) =>
    ^^I max_stack_exp(a1) + max_stack_exp(a2)
}
```

Successor

```
.method public static suc(I)I
.limit locals 1
.limit stack 3
    iload 0
    ldc 1
    iadd
    ireturn
.end method
```

```
def suc(x) = x + 1;
```

Addition

```
.method public static add(II)I
.limit locals 2
.limit stack 6
    iload 0
    ldc 0
    if_icmpne If_else_2
    iload 1
    goto If_end_3
If_else_2:
    iload 0
    ldc 1
    isub
    iload 1
    invokestatic defs/defs/add(II)I
    invokestatic defs/defs/suc(I)I
If_end_3:
    ireturn
.end method
```

```
def add(x, y) =
    if x == 0 then y
    else suc(add(x - 1, y));
```

Factorial

```
.method public static fact(II)I
.limit locals 2
.limit stack 6
    iload 0
    ldc 0
    if_icmpne If_else_2
    iload 1
    goto If_end_3
If_else_2:
    iload 0
    ldc 1
    isub
    iload 0
    iload 1
    imul
    invokestatic fact/fact/fact(II)I
If_end_3:
    ireturn
.end method
```

```
def fact(n, acc) =
    if n == 0 then acc
    else fact(n - 1, n * acc);
```

```
.method public static fact(II)I
.limit locals 2
.limit stack 7
fact_Start:
    iload 0
    ldc 0
    if_icmpne If_else_2
    iload 1
    goto If_end_3
If_else_2:
    iload 0
    ldc 1
    isub
    iload 0
    iload 1
    imul
    istore 1
    istore 0
    goto fact_Start
If_end_3:
    ireturn
.end method
```

```
def fact(n, acc) =
    if n == 0 then acc
    else fact(n - 1, n * acc);
```

Tail Recursion

A call to `f(args)` is usually compiled as

```
args onto stack  
invokestatic .../f
```

Tail Recursion

A call to $f(args)$ is usually compiled as

```
args onto stack  
invokestatic .../f
```

A call is in tail position provided:

- if $Bexp$ then Exp else Exp
- $Exp ; Exp$
- $Exp \text{ op } Exp$

then a call $f(args)$ can be compiled as

```
prepare environment  
jump to start of function
```

Tail Recursive Call

```
def compile_expT(a: Exp, env: Mem, name: String): Instrs =  
  ...  
  case Call(n, args) => if (name == n)  
  {  
    val stores = args.zipWithIndex.map  
      { case (x, y) => "istore " + y.toString + "\n" }  
    args.flatMap(a => compile_expT(a, env, "")) ++  
    stores.reverse ++  
    List ("goto " + n + "_Start\n")  
  }  
  else  
  {  
    val is = "I" * args.length  
    args.flatMap(a => compile_expT(a, env, "")) ++  
    List ("invokestatic XXX/XXX/" + n + "(" + is + ")I\n")  
  }
```

**Using a compiler,
how can you mount the
perfect attack against a system?**

What is a **perfect** attack?

- ➊ you can potentially completely take over a target system
- ➋ your attack is (nearly) undetectable
- ➌ the victim has (almost) no chance to recover

Hacking Compilers

Ken Thompson
Turing Award, 1983

Ken Thompson showed how to hide a Trojan Horse in a compiler **without** leaving any traces in the source code.

No amount of source level verification will protect you from such Thompson-hacks.

Therefore in safety-critical systems it is important to rely on only a very small TCB.

Hacking Compilers

Ken Thompson
Turing Award, 1983

- 1) *Assume you ship the compiler as binary and also with sources.*
- 2) *Make the compiler aware when it compiles itself.*
- 3) *Add the Trojan horse.*
- 4) *Compile.*
- 5) *Delete Trojan horse from the sources of the compiler.*
- 6) *Go on holiday for the rest of your life. ;o)*
