^{1.13)} What has been the most positive aspect of this module for you, and if you could recommend one improvement to the Module Organiser what would it be?

- Lecture Capture not working is a major annoyance; otherwise excellent module!
- Positive aspect: It's really interesting that you're taking modern research and applying it. Also, the format of the assignments (extending code, rather than writing from scratch) is really helpful, more manageable, and probably simulates real-world programming better anyway (there's almost no reason to write anything from scratch nowadays!).
One improvement: short tangents/asides about real-world applications (airplane compilers!) are interesting, but try to stay focused on the material :)
- Professor Urban has been very helpful and kind about coursework. He is also very responsive through email.
- This has been by far one of the best modules I've had the pleasure of taking this year. I think the module has a great balance between theory and practice and it's really nice to end up with my own compiler at the end of the module. In addition, Dr. Urban is a fantastic lecturer: he always answers my emails and gives me constructive feedback on how I can improve my work. Really great module.
