## **Access Control and Privacy Policies (11)**

Email: christian.urban at kcl.ac.uk

Office: S1.27 (1st floor Strand Building)

Slides: KEATS (also homework is there)

- you can still send me your homework
- Unix AC question: use a terminal-based editor (vm, vim)
- exams: 2 out of 3 questions, 5 or so subquestions each, you can fill in your answers on the question sheet

## **Interlock Protocol**

The interlock protocol ("best bet" against MITM):

I. 
$$A \rightarrow B : K_A^{pub}$$

 2.  $B \rightarrow A : K_B^{pub}$ 

 3.  $\{A, m\}_{K_B^{pub}} \mapsto H_1, H_2$ 
 $\{B, m'\}_{K_A^{pub}} \mapsto M_1, M_2$ 

 4.  $A \rightarrow B : H_1$ 

 5.  $B \rightarrow A : \{H_1, M_1\}_{K_A^{pub}}$ 

 6.  $A \rightarrow B : \{H_2, M_1\}_{K_B^{pub}}$ 

 7.  $B \rightarrow A : M_2$ 

## **Interlock Protocol**

The interlock protocol ("best bet" against MITM):

I. 
$$A \rightarrow B : K_A^{pub}$$

 2.  $B \rightarrow A : K_B^{pub}$ 

 3.  $\{A, m\}_{K_B^{pub}} \mapsto H_1, H_2$ 
 $\{B, m'\}_{K_A^{pub}} \mapsto M_1, M_2$ 

 4.  $A \rightarrow B : H_1$ 

 5.  $B \rightarrow A : \{H_1, M_1\}_{K_A^{pub}}$ 

 6.  $A \rightarrow B : \{H_2, M_1\}_{K_B^{pub}}$ 

 7.  $B \rightarrow A : M_2$ 

m = How is your grandmother? m' = How is the weather today in London?

$$egin{aligned} A 
ightarrow C : K_A^{pub} & A 
ightarrow C : H_{\mathrm{I}} \ C 
ightarrow B : K_C^{pub} & C 
ightarrow B : C_{\mathrm{I}} \ B 
ightarrow C : K_B^{pub} & B 
ightarrow C : \left\{ C_{\mathrm{I}}, M_{\mathrm{I}} 
ight\}_{K_C^{pub}} \ C 
ightarrow A : \left\{ H_{\mathrm{I}}, D_{\mathrm{I}} 
ight\}_{K_A^{pub}} \ \left\{ A, m 
ight\}_{K_C^{pub}} & \rho 
ightharrow \rho 
ight. & \rho 
ight$$

- you have to ask something that cannot imitated (requires A and B know each other)
- what happens if m and n are voice messages?
- the moral: establishing a secure connection from "zero" is almost impossible—you need to rely on some established trust
- that is why we rely on certificates, which however are badly, badly realised (just today a POODLE attack against SSL)
